

doors2ai — Claude-Optimized Content Update Brief

Document purpose: Provide Claude with a deterministic, production-safe brief to update **index.html** content only. This document is written as a UX/UI content direction brief with exact guardrails and explicit replacement instructions.

Target file index.html	Reference file doors2ai_homepage_v2.html	Scope Content only	Do not change CSS, layout, classes, IDs, links
----------------------------------	--	------------------------------	--

1. Role Claude should assume

- Act as a senior UX/UI content designer and technical website copy editor.
- Use the existing homepage structure as fixed.
- Use doors2ai_homepage_v2.html as positioning reference, but update only index.html.
- Improve clarity, credibility, beginner confidence, and engineering seriousness.
- Do not introduce hype language, visual changes, or structural refactors.

2. Non-negotiable guardrails

- Do not modify CSS.
- Do not change class names, IDs, or file names.
- Do not change layout order or section structure.
- Do not remove or add sections.
- Do not change buttons, href destinations, or responsive behavior.
- Only replace visible text content where specified below.
- Preserve existing HTML hierarchy and semantic tags.
- Keep the homepage tone professional, structured, beginner-safe, and engineering-focused.

3. Homepage content intent

- Position doors2ai as a structured online training platform, not a generic coding bootcamp.
- Emphasize online instructor-led cohort learning.
- Make the site feel credible for beginners and serious enough for technical learners.
- Highlight progression: frontend → full stack → AI engineering.
- Reinforce real projects, production thinking, and guided learning.

4. Exact update instructions by section

HERO — Enrollment tag

Action: Replace the current hero tag text only.

Current text / reference: Now enrolling — Cohort 2025

Replace with: Now enrolling — Online Cohort

HERO — Main headline

Action: Keep the existing headline exactly as-is. No change required.

Current text / reference: From beginner to
AI engineer —
the structured path.

Replace with: No change

HERO — Supporting paragraph

Action: Replace the existing hero paragraph only. Preserve the paragraph element and its class.

Current text / reference: doors2ai is a structured AI engineering bootcamp built for people with no prior experience. Learn Python, RAG, LangChain, LangGraph, and Multi-Agent systems — then ship real systems into production.

Replace with: doors2ai is an instructor-led online training platform for people who want a serious path into AI engineering and modern software development. Learn Python, full stack fundamentals, RAG, LangChain, LangGraph, and agentic AI systems through a structured curriculum designed to take you from beginner to production-ready.

HERO — Meta line

Action: Keep the existing 3 meta items, but replace their text values.

Current text / reference: No CS degree required | Beginner to production-ready | Cohort-based learning

Replace with: No CS degree required | Beginner to production-ready | Live online cohort learning

TRUST BAR

Action: Replace the four trust bar text labels only. Preserve icons and structure.

Current text / reference: 12 structured modules | Python → LangGraph → Multi-Agent | Enterprise capstone project | MCP governance training

Replace with: Structured learning paths | Beginner to production-ready | Real projects and capstone work | Live online instructor guidance

WHY DOORS2AI — Intro paragraph

Action: Replace the paragraph below the section title only.

Current text / reference: Most AI courses teach you to copy prompts. We teach you to design systems — with governance, safety, and production-grade delivery from the very first module.

Replace with: Most online courses teach tools in isolation. doors2ai teaches structured engineering thinking — how to build, explain, and improve real systems with the right foundations, workflows, and guidance from the start.

WHY DOORS2AI — Card 1

Action: Replace both heading and body copy.

Current text / reference: Structured, not scattered | 12 locked modules in a deliberate sequence. Each module builds directly on the last — no skipping, no confusion.

Replace with: Structured, not scattered | Clear learning paths, sequenced modules, and guided progression so beginners do not get lost jumping between disconnected tutorials.

WHY DOORS2AI — Card 2

Action: Replace both heading and body copy.

Current text / reference: Beginner to production | We start from zero Python and end at enterprise-grade agentic systems you can design, defend, and deploy.

Replace with: Beginner-safe, serious training | Start with fundamentals, build proper mental models, and progress into real engineering workflows without being overwhelmed on day one.

WHY DOORS2AI — Card 3

Action: Replace both heading and body copy.

Current text / reference: Real system design | Capstone projects require typed state, LangGraph orchestration, RAG pipelines, and MCP governance. No toy demos.

Replace with: Real projects, not toy demos | Build portfolio-ready applications, full-stack systems, and AI projects that reflect how modern products are actually delivered.

WHY DOORS2AI — Card 4

Action: Replace both heading and body copy.

Current text / reference: No "magic" thinking | We correct LLM misconceptions in Module B before building on them. You'll know exactly what agents can and cannot do.

Replace with: Production mindset from the start | Learn how systems behave in practice — including reliability, guardrails, architecture, and delivery — not just how to make a demo run once.

LEARNING PATH — Intro paragraph

Action: Replace the paragraph below the section heading only.

Current text / reference: Each track builds directly on the previous. Enter at any level — or complete the full journey from frontend to full-stack to Agentic AI.

Replace with: Choose your entry point based on your background and goals. Each online program is designed to stand on its own while also connecting into a longer path from frontend foundations to full stack development to AI engineering.

LEARNING PATH — Track descriptions

Action: Replace the body paragraph for each of the three tracks. Preserve titles, badges, durations, and technology tags unless needed for existing consistency.

Current text / reference: Existing track descriptions in index.html

Replace with: Frontend Engineering: Learn how to build modern, responsive user interfaces with the tools used in production teams. Ideal for beginners starting their development journey.

Full Stack Development: Go beyond the frontend and learn how applications work end to end, including APIs, backend logic, databases, and deployment.

Agentic AI Engineering: Build the AI engineering stack properly — from Python and prompt design to RAG, orchestration, governance, and production-oriented agent workflows.

PROGRAMS PREVIEW — Intro paragraph

Action: Replace the supporting paragraph only if needed to better match the updated positioning.

Current text / reference: Each program is self-contained. Complete one or stack them. All pathways lead to Agentic AI.

Replace with: Each program is self-contained. Start where you are, build strong foundations, and progress toward modern full stack and AI engineering work through a structured learning path.

PROGRAMS PREVIEW — Card summaries

Action: Update only the short summary bullets where beneficial for clarity. Preserve card structure and links.

Current text / reference: Current topic-oriented bullets

Replace with: Frontend card should emphasize strong foundations and projects learners can show and explain. Full Stack card should emphasize complete application delivery, including backend, APIs, databases, and deployment. Agentic AI card should emphasize the modern AI engineering stack: Python, LLM foundations, retrieval, orchestration, and multi-agent system design.

OUTCOMES — Intro paragraph

Action: Replace the sentence under the heading only.

Current text / reference: Every doors2ai student completes real systems — not course certificates alone.

Replace with: Every doors2ai learner finishes with practical work, clearer technical judgment, and a stronger path into modern engineering roles.

FINAL CTA — Section label, heading, paragraph, secondary button

Action: Update the CTA copy to reflect structured online learning and curriculum depth. Preserve button styling and destinations.

Current text / reference: Current CTA copy in index.html

Replace with: Section label: Start your path

Headline: Ready to learn seriously and build with confidence?

Paragraph: Join doors2ai and follow a structured online learning path into full stack development, AI engineering, and agentic AI — with real projects, live guidance, and a curriculum built for real-world delivery.

Primary button: Keep as Apply Now

Secondary button: Change to View Full Curriculum

5. Implementation method Claude should follow

- Open index.html only.
- Locate each existing section by its visible text and surrounding semantic container.
- Replace text carefully without altering markup structure.
- Where a heading is marked 'No change', leave it unchanged.
- Where an item says 'preserve structure', update only the visible text node(s).
- Do not normalize or rewrite unrelated copy outside the sections listed above.
- Save the file without touching CSS or other pages.

6. Deterministic validation checklist

- Hero headline still matches the original line breaks and emphasis styling.
- All buttons still point to the same href targets as before.
- No class names changed.
- No IDs changed.
- No section order changed.
- No icons changed in the trust bar.
- No cards added or removed.
- No style.css edits made.
- Mobile and desktop layout remain unaffected because only text content was changed.
- The homepage now clearly communicates: structured path, beginner-safe seriousness, online cohort delivery, and real project outcomes.

7. Final instruction Claude can execute directly

Update index.html only.

Use doors2ai_homepage_v2.html as positioning reference, but do not copy structure from it and do not modify any styling.

Apply the content updates exactly as specified in this brief:

- content changes only
- no CSS changes
- no layout changes
- no class or ID changes
- no refactoring
- no link changes
- preserve responsive behavior

After updating, perform a final verification pass to confirm:

1. only visible text content changed
2. structure is preserved
3. all CTAs and anchors still work
4. homepage positioning now reflects a structured, instructor-led online training platform for frontend, full stack, and AI engineering.

End of brief.
