

programs.html Dark Hero Update — Claude Optimized Brief

Purpose: apply the dark hero variant to **programs.html** safely, using the existing CSS variant already added to **style.css**. This is a minimal, production-safe HTML change only.

Target HTML file programs.html	Related CSS style.css already contains .page-hero-dark	Scope Single class update	Risk level Low
--	---	--	--------------------------

1. Role

Act as a precise HTML/CSS implementation editor. Make the smallest change possible to activate the dark hero styling on the Programs page.

2. Non-negotiable guardrails

- Do not modify CSS beyond what already exists.
- Do not change layout, spacing, typography, buttons, links, classes elsewhere, or section order.
- Do not edit any visible text content.
- Do not refactor markup.
- Only update the hero container class in programs.html.
- Preserve responsive behavior.

3. Exact required change

In **programs.html**, locate the Programs page hero container near the top of the file under the comment **<!-- PAGE HERO -->**.

Current HTML:

```
<div class="page-hero">
```

Replace with:

```
<div class="page-hero page-hero-dark">
```

4. Important clarification

The CSS variant **.page-hero-dark** already exists in **style.css**. The problem is that **programs.html** is still using only **page-hero**, so the dark hero styling is not being applied.

5. What must not change

- Do not change the `<link rel="stylesheet" href="style.css">` line.
- Do not change any text inside the hero.

- Do not apply page-hero-dark to any other page.
- Do not touch curriculum.html, pricing.html, about.html, faq.html, or contact.html.
- Do not change nav, CTA, footer, or any program card content.

6. Validation checklist Claude must confirm

- programs.html now uses class="page-hero page-hero-dark" on the hero container.
- Only that single class addition was made.
- No visible text changed.
- No CSS changed.
- No layout changed.
- No links changed.
- The Programs hero now renders with the dark background variant.
- All other pages remain unaffected.

7. Final execution instruction

Update programs.html only.

Apply this exact HTML change:

- change `<div class="page-hero">` to `<div class="page-hero page-hero-dark">`

Do not make any other edits.

After updating, confirm the validation checklist passes.
